

# Protect Your Surface Now Before it's Too Late

Are you incurring any surface damage during fabrication of your trailers? Protect those surfaces in your plant with **Surface Guard** protective films. We have a protective solution to help you eliminate wasted repair time and costs associated with scratched or damaged parts. Give us a call to learn more about **Surface Guard** and our protective film line.

Our company manufactures adhesive coated protective films. **Surface Guard's** products are made to be applied either by machine or by hand, and are designed to remove cleanly from your surface. Our protective film is applied before fabrication. For your industry, common fabricating may include: bending, cutting, drilling and stamping. With **Surface Guard's** masking applied prior to processing, companies virtually eliminate surface damage during fabrication, shipping and handling.

Common surfaces our masking grades are applied to include:

- Painted metal and aluminum
- Buffed and mill finished aluminum
- Polished stainless sheets
- Plastic sheet
- Anodized aluminum

If you are experiencing any surface damage during fabrication of your trailers, and are interested in learning more about **Surface Guard** and the solutions we can provide for you, please give me a call at 630.236.8250 or send me an email at [dean@surfaceguard.com](mailto:dean@surfaceguard.com).
