

Protective Masking For Optical Films

***Protect your Smooth Coated or Textured Polarizer,
Diffuser or other Optical Film Applications***

Features and Benefits of SGI's Optical Film Masking Products:

Specialized films are used to meet your specific needs

- > Excellent "lay-flat" of our films insures no curling of the Optical Films after protective masking is applied and processed
- > High clarity films allow for inspection of Optical Films through the protective masking
- > Fewer gels reduces likelihood of surface damage to Optical Films

Experienced lab personnel match your specific application requirements with a Surface Guard product

- > Specially formulated adhesive systems for both Textured and Smooth Optical Films
- > No adhesive transfer, hazing or witness marks when film is removed
- > Easy removal of masking product
- > "Re-laminate-able" - Can be peeled and then re-applied with ease
- > Low to no adhesion build of our protective masking after application to Optical Films
- > Sufficient adhesion to keep masking in place during die-cutting

Customized Packaging

- > Plastic cores, polybagged rolls and plastic pallets are a few of the options we offer to insure the cleanliness of our products

Total quality management throughout our manufacturing process insures consistent top quality products to our customers, and more importantly your customer

- > Experienced line operators trained for tight inspection of product from incoming raw material to finished product
