

A New Year's Resolution to Cure Your Packaging Hangover

Stop Stuffing and Start Automating!

January 2007

Are you suffering from a post-New Year's "packaging hangover?" Can you benefit from increased productivity and throughput in your packaging operations? Then stop doing it the "Old Way" by stuffing mailers, bags, and boxes and eliminate your packaging bottlenecks with automated Cold Seal packaging. We can help you customize your system to YOUR specific requirements and easily integrate it into your existing warehouse and fulfillment system.

The Old Way of Fulfillment

Stuffing Mailers, Boxes & Bags!

Stuffing Mailers, Boxes & Bags is:

- * **Labor Intensive:** At the peak holiday time, the "hand pack" system is inconsistent and timely, usually resulting in bottlenecks!
- * **Slow:** 3-5 pkgs. by hand depending on worker productivity.
- * **Material Intensive:** Ties up your warehouse space with various boxes, bags, mailers, tapes, bubble, peanuts, and etc.

Utilize your labor more effectively and prevent them from being buried in packaging.

Cure your frustrated packers and put an end to the timely stuffing of mailers, boxes and bags.

*No more boxes, mailers, peanuts, bubble and tape needed....
Enough said!*

A New Year's Resolution to Cure Your Packaging Hangover

Stop Stuffing and Start Automating!

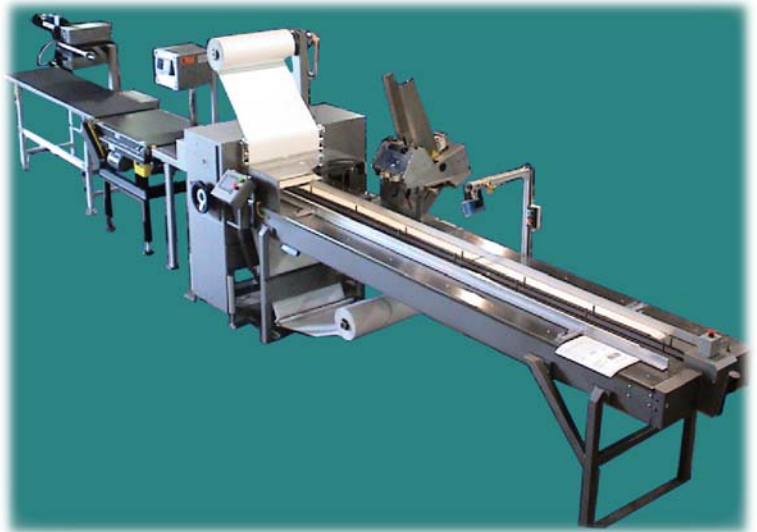

January 2007

The New Way of Fulfillment *Automated Cold Seal Packaging!*

Automated Cold Seal Packaging is:

- * **Labor Saving:** Utilize employees more effectively and eliminate cumulative trauma injuries from repetitive packaging work
- * **Fast:** (20-30 pkgs/min vs. 3-5 by hand)
- * **Easy** to Install, Use, and Integrate into your existing operations
- * **Flexible:** Package various items of varying sizes using a variety of cold seal materials
- * Every machine is able to run any SGI/SFS Cold Seal product, and able to handle various sized materials

Surface Guard & Single Face Supply
