

Surface Guard™ 104/105 Series Protective Films

New Surface Protection Solutions for Semi-Matte or Textured Metals & Plastics

If you have ever visited the Surface Guard Lab you will typically see new surface evaluations, the latest testing equipment and our R&D Team working on creating the next new protective product. The other thing you may see is the device we use to create our product numbering system. Yep, the secret is out, we use a dartboard.

Just kidding about that! At Surface Guard our product numbers don't really tell the story of what that product is. We'd rather describe our products to you ourselves and help you find new applications for them. We've also found it keeps our competition scratching their heads trying to copy our many products.

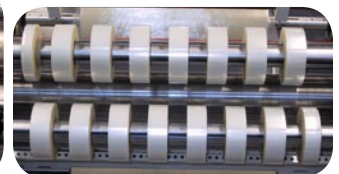

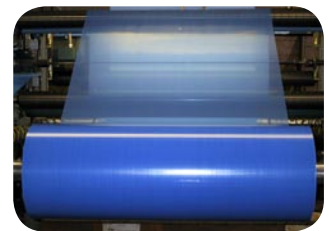

Surface Guard™ 104 & 105 Protective Films

So we are proud to announce 2 new protective masking films. Surface Guard™ 104 & 105 grades of protective film were developed using a new proprietary adhesive system formulated to provide superior surface protection with quick & clean removal. These products are suited for plastic & metal applications which require low to medium adhesion. The Surface Guard™ 104 & 105 are coated with a hard adhesive system which gives it ideal adhesion to the surface with low adhesion build over time. This all translates into a surface protection film that provides protection during processing, assembly and shipping while also providing a quick and clean removal from the surface when protection is no longer necessary. This is what our sales & marketing team describe as the “zippy peel”. (see we can be technical too!)

Surface Guard™ 104 & 105 Capabilities

Surface Guard™ 104 & 105 can come in many shapes or sizes depending on your needs. We can customize our products to YOUR requirements. Capabilities available for our 104 & 105 grades:

- Can be coated on 1.5 - 5 mil film
- Clear, opaque or tinted films available
- Widths from 1” up to 80” (Lengths up to 15,000’)
- We can print 2 color on any SGI product
- We can perforate our films into squares and rectangles and if you need it in die cut form, contact us, we can help you with that as well.

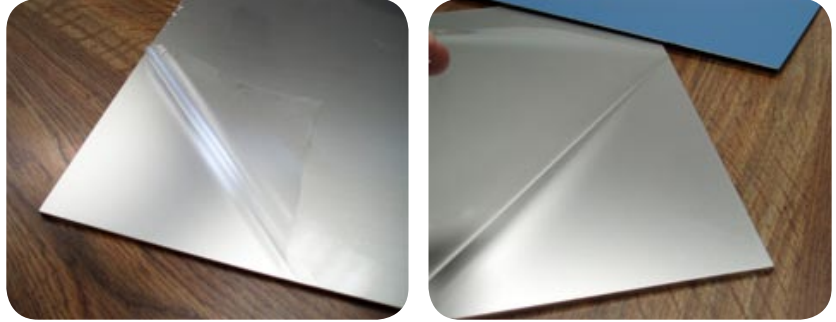

New Surface Protection Solutions for Semi-Matte or Textured Metals & Plastics

Applications for Surface Guard™ 104 & 105

Surface Guard™ 104 & 105 grades provide ideal surface protection for a number of metal & plastic applications featuring matte or textured finishes. This product has also performed well for sheeted polycarbonate applications where hazing is typically an issue. Below is a list of some of the key applications for Surface Guard™ 104 & 105:

- Painted Metals (Dull & Matte)
- Smooth/Matte Polycarbonates
- Brushed Aluminum
- Textured Plastics
- Anodized (Mill Finished) Aluminum
- Stainless Steel (Brushed Steel)
- Coated Polycarbonate

The above list highlights just some of the applications Surface Guard™ 104 & 105 could protect. Contact your local Surface Guard rep for more information on these (or any) SGI product, free samples are available too!

About Surface Guard

Surface Guard is committed to providing superior protective packaging solutions with our extensive line of products. We manufacture protective films in a wide range of adhesive systems and which are used in a variety of industries, including metals, plastics, automotive, building & construction, furniture & laminates, and so on. Surface Guard also manufactures the most comprehensive line of cohesive "coldseal" products (featuring single face, papers, linerboard, clear & co-ex films and poly/paper laminates). We also manufacture industrial and decorative Wave Flute and single face corrugated products. The staff of Surface Guard has over 100 years of protective packaging know-how. We take pride in manufacturing the highest quality packaging products with the best service in the industry. Contact your local rep. for samples and pricing today.
