

Surface Protection Solutions for the Building & Construction Market

Well it is that time of year that the snow begins to melt, the mercury rises and baseball players report to camp. The other thing synonymous with this time of year is new construction, remodeling, moving, and “spring cleaning” jobs around the house. At Surface Guard we have a number of protective masking films that help keep common surfaces clean and protected. Our products reduce the cleanup cost and time associated with repairs and rework of carpeting, windows, countertops, flooring and other surfaces needing protection around the job site, office, homes, RV etc. Below are a few of the products that can benefit you or your customers.

→ Carpet Protection Film

Carpet protection films are a temporary, yet very effective way to protect carpeting from tracked dirt, paint, spills, foot traffic, construction debris, damage, or anything your kids or dogs dream up to trash your brand new carpeting. Surface Guard’s tough polyethylene 2, 3 or 4 mil carpet masking product, “Carpet Guard,” is a proven product and commonly used by builders, remodeling contractors, RV owners and RV manufacturing companies, not to mention, homeowners. Carpet Guard replaces the commonly used but traditionally bulky drop cloths, tarps, and visqueen.

- Proven adhesive system that will apply and stay down on your carpet without lifting
- Releases clean from carpeting without leaving adhesive residue. Simply peel it up and discard.
- Tough PE based film resists punctures and tears
- Custom widths, lengths, perforations available
- Regular or reverse wound rolls for easy application
- Custom 2 color printing is available

→ Floor Protection Film

We have 2 & 3 mil products great for the protection of most hard, non-porous flooring such as, vinyl, tile and linoleum. Surface Guard’s, Floor Guard, can be tinted for easy identification and also reverse wound for easy application. Unroll it, stick it and protect it!

Surface Protection Solutions for the Building & Construction Market

→ Window Protection Film

Surface Guard protective films can be specially designed for indoor or outdoor exposure to protect window & glass during shipment to the building site as well as at the building site. Our products can be and are applied by homeowners, at window manufacturing companies, as well as at building sites where finished windows are already installed. They are ideal for protecting windows from all the home and job site hazards, be it splattered paint, excess stucco, dirt, dust and scratched glass. With Surface Guard's, Window Guard, clean up is a breeze, simply peel off and toss away. That's a whole lot easier (and in some instances safer) than repainting, reworking or replacing windows and glass not protected by Surface Guard window protection film.

- 2 and 3 mil films available in clear and tinted colors
- UV films available for extra outdoor protection
- Window masking films are available for 30-90 day protection
- Custom widths and put ups available
- Water based adhesive system on film will remove cleanly from window
- Custom printing available to identify your company or to include installation or removal instructions right on the window unit

→ Countertop / Solid Surface Protective Films

Need to protect high-pressure laminate, marble, granite, solid surface countertops, bathtubs, sinks and cabinets during the construction process? Surface Guard has the right protective film for the job. We have a wide range of manufacturing capabilities to supply you the right product for the job. Surface Guard protective films are ideal job site products to easily protect a wide range of surfaces from scratches, dirt and other damage common around the building and construction sites. Contact us to discuss your unique application and we will supply you a product that works.
